Divide and Conquer, Sorting and Searching, and Randomized Algorithms

Python for Data Science Course

Introduction to TensorFlow for Artificial Intelligence, Machine Learning, and Deep Learning

A Crash Course in Data Science

Publications

Predicting Potential Applicants for any Private College using LightGBM

Surya Thakur

Lead Engineer @ HighLevel | Building neary.in (AI-powered social platform) | Engineering Mentor @ IIT Delhi

Noida, Uttar Pradesh, India

Summary

Senior Software Engineer | Backend Engineer | Distributed Systems | Platform Engineering | AI Infrastructure 6+ years building high-performance, cloud-native backend systems that scale to millions — across GoDaddy, Probo, and Merkle. I specialize in taking products from 0→1 and evolving them into production-grade platforms handling 20M+ users and 1M+ requests/min. My engineering spans payments infrastructure, onboarding systems, real-time platforms, data pipelines, and internal tooling — with deep focus on scalability, reliability, performance, and observability using Elastic Stack, Prometheus, and Grafana. As AI reshapes how products are built, I've worked on backend infra that powers LLM-driven features — low-latency APIs, streaming pipelines, token-aware rate limiting, and LLM orchestration. Familiar with Anthropic's Claude API and generative AI system design. I don't just write code — I own outcomes. Led cross-functional engineering initiatives, drove software architecture decisions, mentored engineers, and partnered with product, risk, and business teams to deliver at scale. What I bring:

- Engineering Leadership — architecture, mentoring, cross-team execution
- AI-Native Backend — infra built for LLM-driven, intelligent products
- System Design at Scale — 20M+ users, 1M+ rpm, high-availability systems
- Speed + Quality — fast shipping with clean, maintainable engineering
- Full Ownership — system design to production to incident response

Stack: Go, Node.js, TypeScript, Python, React, Next.js, AWS, Docker, Kubernetes, Kafka, PostgreSQL, MongoDB, Redis. Mentoring engineers via IIT Delhi — system design, backend engineering, and career growth. Open to connect — especially if you're building AI-powered or high-scale backend systems.

#Languages: JavaScript (JS), TypeScript (TS), Python, Go (Golang), Java Backend: Node.js (NodeJS), Express.js, NestJS, REST APIs, API Development, Microservices, Event-Driven Architecture, LLM API Integration

Frontend: React (ReactJS), Next.js, HTML5, CSS3

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL, NoSQL

Infra: AWS, Cloud Computing,

Docker, Kubernetes (K8s), CI/CD, Software Architecture
Messaging: Apache Kafka, Async Processing, Streaming Pipelines
Observability: ELK Stack, Prometheus, Grafana
AI/LLM: Anthropic Claude API, LLM Integration, Generative AI, Token Management
Focus: Distributed Systems, System Design, Backend Engineering, Performance, Platform Engineering, Engineering Leadership, Tech Lead, AI Infrastructure

Experience

HighLevel

Lead Software Engineer

April 2026 - Present (2 months)

Indian Institute of Technology, Delhi

Engineering Mentor - Consultant

March 2025 - Present (1 year 3 months)

Delhi, India

(): Leading the architecture of the DataRabbit platform, a governed data exchange marketplace designed specifically for scalable research use. Driving the technical vision to ensure these projects are built for long-term scalability and structured for open-source community impact.

& : Directly leading and mentoring a team of engineering students in designing and developing production-ready, data-driven systems. Bridging the gap between academic theory and real-world system design by treating the academic projects like high-scale industry products.

& : Partnering closely with the Computer Science Department faculty at IIT Delhi. Aligning project objectives with rigorous academic goals while instilling industry-standard engineering practices, ensuring the students are fully prepared for full-time SDE roles.

GoDaddy

Senior Software Development Engineer

March 2025 - April 2026 (1 year 2 months)

Gurugram

& : Architected and built the GoDaddy Capital platform from the ground up to provide seamless financing access for entrepreneurs in the U.S.

and Canada. Owned the end-to-end loan journey for reseller merchants, successfully unlocking a new credit segment.

- & : Strengthened the core financial ecosystem by designing and executing robust API integrations with third-party lenders. This significantly increased system flexibility and laid the resilient technical foundation required for GoDaddy Capital's vision of global expansion.

& : Acted decisively on user-reported slowness by identifying high-latency APIs and driving cross-functional optimisations with different teams. Implemented asynchronous processing, advanced query tuning, and Elastic observability to successfully reduce P99 latency.

Probo

Full Stack Engineer

December 2021 - March 2025 (3 years 4 months)

Gurugram, Haryana, India

→ - (): Architected and launched a live sports scoring engine from scratch, supporting 100K+ users and handling throughputs of 100K+ requests/minute. Designed an event-driven backend using Node.js, MySQL, and Redis Pub/Sub with WebSockets to deliver ultra-low latency spectator updates, driving a 6% increase in trades and an 11% boost in user onboarding.

- : Engineered a highly dynamic, customized home feed capable of handling up to 3M requests for a massive user base. Decoupled the read path by utilizing offline cron-based pre-calculations and storing user-specific feed arrays in Redis, completely bypassing SQL pagination latency and ensuring instant content delivery.

- : Designed and deployed an intelligent customer experience and auto-reply system serving 40M+ users. This initiative successfully reduced inbound support tickets by 58% and significantly improved platform NPS from 3.9 to 4.4.

& (&): Conceptualized and built internal platforms (Vidhi & Enigma) from the ground up to eliminate manual HR and finance workflows. Managed a dedicated team through the full lifecycle, driving organization-wide adoption and reducing operational costs by 42%.

: Led the technical execution of Probo's partnership program, designing resilient integration pipelines with major news outlets, live cricket feeds, and fantasy gaming platforms to expand market reach and liquidity.

: Go, Node.js, NestJS, TypeScript, React, AWS (Lambda, EC2, S3, RDS, Serverless), PostgreSQL, MySQL, MongoDB, Redis, Kafka, WebSockets, WebRTC, Docker, Kubernetes, Elastic Stack, Prometheus, Grafana

Merkle Sokrati

2 years

Backend Software Engineer II

January 2021 - December 2021 (1 year)

Pune, Maharashtra, India

& : Architected and owned a highly performant, decoupled platform for TataClassEdge (TATA Group) utilizing Gatsby and a headless CMS. Championed performance optimizations using Gatsby 3.0 features, successfully driving a 32%+ uplift in user conversion.

& : Led a 4-engineer squad to successfully deliver the UltraTech (Aditya Birla) platform, establishing robust CI/CD pipelines and utilizing a Node.js and React stack. Dedicated to engineering growth, mentoring fresh graduates through their transition to full-time SDE roles and upskilling the broader team by introducing and driving the adoption of Drupal CMS for the TataStudi project.

& : Served as a core member of the technical hiring committee, conducting 100+ system design and full-stack interviews across multiple seniority levels. Maintained a stringent technical bar to successfully scale the engineering organization with high-caliber talent.

Backend Software Engineer

June 2020 - January 2021 (8 months)

Pune, Maharashtra, India

-- (/): Drove backend development, CI/CD pipelines, and reliable deployments for Utec (Aditya Birla), a high-scale Android application for home building. Led a 4-engineer squad through the full product lifecycle, managing direct client feature planning, rigorous debugging, and on-call production support to ensure high availability.

& : Championed frontend performance by leveraging newly released features in Gatsby 3.0. Established engineering best practices and upskilled the broader team on modern headless architectures, directly contributing to systems that yielded a 32%+ uplift in user conversion.

& : Took the initiative to self-teach Drupal CMS and subsequently championed its adoption across the tech team. Successfully led its architectural implementation for the enterprise-scale TataStudi project, streamlining content delivery and platform maintainability.

Associate Software Engineer

January 2020 - June 2020 (6 months)

Pune/Pimpri-Chinchwad Area

Full-Stack Contribution – Utec Project:

Contributed to both frontend and backend development for the Utec project, ensuring seamless functionality and integration.

Proactive Learning – Magento & Django CMS:

Took the initiative to self-learn Magento and Django CMS to expand technical capabilities and bring versatile solutions to projects.

SAVERA

President

September 2018 - August 2019 (1 year)

BML Munjal University

Club SAVERA believes that "Together we can make a difference."

Savera is a social club and we teach unprivileged kids those who can not afford money to get a good education in school.

Being president of the club in academic session 2018-19, I have started the Navodaya Entrance Exam preparation.

5 out of 7 students were selected in the first attempt. It added a new feather to the club.

Education

BML Munjal University

Bachelor of Technology - BTech, Computer Science

Jawahar Navodaya Vidyalaya (JNV)

X and XII, Science Stream · (2008 - 2015)

ALLEN C

JEE Preparation, Physics, Chemistry , Maths · (2015 - 2016)
